DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "27" has been used to designate both an upper part on page 4 line 18 and a fork page 4 line 20. Also, reference character "17" has been used to designate both a stop on page 4 line 3 and an organ page 5 line 15. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
3. The following title is suggested: "Procedure for the Production of a Bar Notch".
4. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.

Art Unit: 3724

- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The phrase "...in work pieces of wood, plastic or MDF..." is unclear. It is uncertain if these are the only materials that could receive the bar notches disclosed by applicant.

7. Regarding claim 1, the phrase "preferably" renders the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Art Unit: 3724

8. Regarding claim 1, the phrase "characterized" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. The transitional phrase (i.e. between the preamble and the body of a claim) "characterized" and phrases incorporating it ("characterized by", "characterized in that", etc.) are common in applications of European origin in US practice claims containing these words and phrases may be rejected under 35 USC 112 paragraph two when characterized may connote more than mere description (the dictionary definition); in scientific parlance characterization may imply one or more physical steps or procedures (e.g. structure determination, elemental analysis, or qualitative tests) to identify a product. Since it is rare that applicant intends more than a mere description when using this language, physical steps are rarely disclosed. As such, the reader may be unsure about the meaning of the wording of the claims, and additionally the scope of the claim is often unclear ("characterized" conveys no degree of openness). Usually these troublesome words or phrases can be replaced by the standard transitional words "having", "comprising", and "wherein".

Claim Rejections - 35 USC § 102

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

10. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Morrissey.

Art Unit: 3724

Morrissey discloses the same invention including the procedure for production of a bar notch (Fig. 4), that the notch has a plane bottom (27) and two equally long, oblique sides (21 and 22), and that the notches are produced by punching or shearing (Fig. 1), and that the notch is produced using a preliminary shear and a finishing shear (Examiner notes the phrase "...a side member notch 3 and a cross member notch 4 are produced in one punching or shearing operation..." from page 3 lines 18-19. From this phrase, it is considered that one single shearing motion is used, therefore the preliminary shear is considered to be when the shear first enter the material and the finishing shear is considered to be when the shear leaves the material.)

11. Regarding the placement and orientation of the bar notches on their respected members, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

Conclusion

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Russell, Speer, Abraham, Street, Mortimer, Harshberger, Finley and Frakes et al.
